

How to Advocate for Modernizing Virginia's Brain Injury Data Systems

1 Navigate to <https://www.votervoice.net/BIAV/campaigns/131921/respond>

Modernizing Virginia's Brain Injury Data Systems

Virginians living with brain injury deserve a service system that is coordinated, efficient, and built on modern tools that reflect today's needs. For more than 12 years, state-contracted brain injury providers in Virginia have been required by DARS to use a **customized data platform that is now outdated, fragmented, and unable to support the level of care residents need and deserve.**

The current system creates significant barriers for individuals with brain injury, their caregivers, and the professionals who support them:

- There is **no client or caregiver portal** for communication or shared documentation

resulting in **misinterpretation and inconsistent reporting** across providers.

- Client records **cannot be shared across brain injury programs**, limiting continuity of care when a resident moves or transitions to a different program.
- The system does **not comply with current VITA standards**, creating additional risk and inefficiencies.
- Case managers are forced to spend **valuable time wrestling with outdated technology instead of serving Virginians directly**.

Message Body

It is important to me that the brain injury care network makes the most of its data because after surviving a traumatic brain injury from a car crash, I quickly learned how disconnected the system is. I had to tell my story again and again to different providers, wait for records to be transferred, and navigate delays that slowed my recovery. If providers had been able to easily share accurate, up-to-date information, I could have spent less time managing paperwork and more time healing.

Virginians living with brain injury deserve a

4 Type your name and email address.

Modernizing this system will create a **more seamless and coordinated experience** for Virginians living with brain injury—one where providers can communicate effectively, records are secure and shareable, and services can be delivered more efficiently.

- A new data platform will:
 - Improve access to care
 - Reduce delays
 - Strengthen communication between clients, caregivers, and providers
 - Enhance statewide consistency
 - Improve outcomes by giving case managers more time to focus on people, not paperwork

Modern data systems are a basic necessity — not a luxury — for a strong Virginia brain injury safety net. Investing now ensures that residents living with brain injury receive the coordinated, high-quality support they deserve.
